TECHNICAL SECTION

ROLLER CHAINS

62

Connecting Link Spring Lock Type

The two pins and one link plate are furnished assembled. The standard coverplate is designed for a split-fit on the pins. It is held in place by a flat spring-steel lock, split at one end to permit installation in grooves at the end of each pin. Press-fit coverplates are also available and are recommended for heavy duty applications.

Connecting Link Cotter Pin Type

The two pins and one link plate are furnished assembled. The coverplate may be either press-fit or slip-fit on the pins. Press-fit con-

necting links are recommended for heavy duty applications. Press-fit coverplates are

standard on multiple strand oil field chains.

Roller Link

Standard for all sizes of roller chains. They are furnished as complete roller link assemblies. The two bushings are pressfit in each of the link plates. The same roller link are used for single and multiple strand chains.

Single-Pitch Offset Link Slip-Fit Type

This link is furnished with slip-fit pin unassembled in the offset link plates. The flat milled on one end of the pin prevents it from turning in the link plate.

Two-Pitch Offset Assembly Press-Fit Type For Single Strand Chain Only

This type of assembly is available for all sizes of standard single strands chains, and consists of an offset link and roller link assembled together. The pin is press-fit in the offset link plates and is riveted. The press-fit construction of this assembly greatly increases it's structural rigidity, reliability, and durability. For these reasons, the two-pitch offset link is recommended in preference to the single-pitch offset link.

British Standard roller chains conform to the specifications of IS 2403-1975, ISO R606 "B", DIN 8187 and BS 228, and are supplied in single and multiple strands.

Though it's referred to as strandard chain, it's anything but. Our American Standard chains, built to ANSI B29.1 standards, are manufactured to very specific requirements. The only thing standard about our chains are their ability to fit many standard applications. From industry to agriculture, our American Standard chains are designed to last longer than any other manufacturer's roller chains.

300 Series Stainless Chains are assembled entirely from 300 Series (austentic) components. They have excellent corrosion resistance and very low magnetic permeability but cannot be expected to have same wear resistance of our heat treated stainless chains. For industries that required it, 300 Series chain can be considered "non-sparking".

All Can-Am Sharp Top Chains exceed ANSI and BRITISH STANDARDS and are exact replacements for new and existing Sharp Top Roller Chain applications. Can-Am Chain is competitively priced and readily available for any standard applications. Custom designed systems are also available.

Can-Am Sharp Top Roller Chain Features:

- Fine blanked side plates
- Heat treated shot peened bushing and plates for higher fatigue strength
 - Triple alloy steel rivet pins with heavy case
- Ballized bushed plates for uniform hole size
- Heavy pressed fit for pins and bushings
- Factory lubricated for extended chain lifeOptional Induction hardened teeth
- Optional machined bottom

50-55 Rc

BARREL

INDUCTION HARDENED ZONE 40-45 Rc

WR - Welded steel chain c/w heat treated

WH – Welded steel chain – fully heat treated

Induction Hardened Barrels & Rivets WHIBRS - Same as IBR plus sidebar wear

XHD - Extra heavy duty

NOTE: Unless otherwise specified (quoted) welded steel chains are always supplied in

HARDENING

hardened barrels & rivets.

IMPACT & STRENGTH

Through heat treated chain (to the proper hardness) will improve impact and ultimate

Due to increasing demand from our customers and our commitment to serving the industry, we have broadened our selection base and to achieve this effectively, we have adopted the following National Standard Chain Designation:

WHIBR - Fully heat treated plus further

surfaces

WD – Welded steel drag chain

CS – Cast steel barrel

10 ft. lengths.

THROUGH HEAT TREATING & INDUCTION

(IBR) denotes fully heat treated & induction

(IBRS) denotes fully heat treated & induction hardened barrels, rivets & side bars.

Used individually or combined the two types of heat treating CAN-AM chain can dramatically increase chain life.

strength.

WEAR

In a non-abrasive environment heat treated chain will give up to 50% greater wear life. Reduction of elongation of side bar holes can be assisted by induction hardening the hole perimeter.

In a non-abrasive environment, induction hardened chain will give several times greater

NOTE: Individual situations may vary wear

Induction hardening depth and Rc range will vary to suit thickness of material, diameter of rivets and particular applications.

HEAT TREATED AND INDUCTION HARDENED

CAN-AM welded steel chains are available from stock with fully heat treated parts and/or induction hardened parts. For maximum chain life in severe applications including heavy impact loading, high speed requirements, capacity loads, or abrasive conditions, some or all of your CAN-AM chain will benefit from specific heat treatment.

WELDED CHAINS

OFFSET SIDEBAR WELDED STEEL **CHAIN**

CAN-AM WELDED STEEL CHAINS provide an economical and superior method for conveying most materials. They are most common in the lumber, pulp and paper, plywood, OSB and other board mills, bucket elevator and bulk material handling.

For higher impact strength and greater wear resistance, use fully heat treated or induction hardened chain.

Chain Number	Pitch	Ultimate Strength	Allowable Working Load	Links	Average Weight	Approx. Overall Width	Length of Bearing	Rivet Dia.	Side Bar Thickness	Side Bar Height	Approx. Tooth Face at Pitch Line	Outside Barrel Dia.

EXTRA HEAVY-DUTY WELDED STEEL CHAIN

CAN-AM EXTRA HEAVY DUTY WELDED STEEL CHAINS provide higher ultimate strength, superior impact resistance and longer life than standard chains. The CAN-AM Tough Guy features include: greater impact capabilities, higher ultimate strength and larger wearing surface.

The following pages detail some of the standard mill chain attachments that we manufacture. CAN-AM CHAINS has also manufacutured thousands of special attachments in conjunction with our customers, to solve specific conveying problems. In many cases these design changes have resulted in a substantial increase in the chain's overall service life and in some cases as much as a three (3) times increase.

We are problem solvers. Challenge us to perform for you!

CAN-AM UHMW FLIGHTS

Sleeves are constructed of UHMW and press fitted over steel tube or flat bar. CAN-AM UHMW flights act as the wear strip in the bottom of the conveyor.

Easily replaced sleeves save flat bar and chain wear and greatly reduce maintenance costs. Other features include reduced power consumption and noise reduction.

Flat Bar Style $FB = 3 \ 1/2" \ x \ 1"$ $UHMW = 4 \ 1/2" \ x \ 2" \ outside$

HSS Square Tube Style
Tube = 3" x 3"
UHMW = 4" x 4" outside

CAN-AM WELDED STEEL DRAG **CHAINS**

CAN-AM WELDED STEEL DRAG CHAINS provide efficient and economical service when used in chip and sawdust conveyors, and like applications. Features include original formed barrel design for complete rivet to barrel contact for maximum rivet wear, higher impact strength, weldability of attachments and option of heat treating and/or induction hardening specific parts.

Reverse barrel chain is available. Contact Factory.

SUPER HOG CHAIN

Drag Chains

CAN-AM "SUPER HOG" DRAG CHAIN features a formed, heavy wall seamless tube barrel. This rugged barrel supports a through and induction hardened 1" steel rivet. The "Super Hog" design eliminates crushed/peeled barrels and reduces wear due to racking. When the going gets tough...use CAN-AM "Super Hog" in log hauls, chip conveyors & heavy duty hog fuel handling application.

Standard "SUPER HOG" chains feature fully through hardened then induction hardened rivets available with heat-treated sidebars (WDRS) or heat-treated sidebar and barrels (WDH).

WORK HOG CHAINS

Drag Chains

CAN-AM "WHOLE HOG" DRAG CHAIN has the same rugged characteristics as the "Super Hog". The main difference...the barrel is extra heavy, round, but packed with the same oversize, greased rivet. This chain is for "Big" logs and two way operations. Use "Whole Hog" for applications so brutal that only a real "tough" chain will do the job. CAN-AM chain...built to take it!

Standard "WHOLE HOG" chains feature fully through hardened then induction hardened rivets and through hardened side bars.

POWER TRANSMISSION CHAINS

POWER TRANSMISSION CHAINS are widely used throughout the lumber industry in a broad range of conveying, transmission, and either offset or straight sidebar design. The majority of bushed roller chains are best suited for slow or moderate speed drive and conveyor applications since they are made to commercial standards for clearance, fits, and limits. Broaches on one end of the rivet

and flats on both ends of the bushing prevent these parts from rotating in the sidebar holes. These chains are widely used throughout the elevating applications. They are available in industry with our cast steel bullnose or other special attachments for use on trim tables. (See pages 35 and 36.)

See page 44 for "J" Bar sorter chains. Zero = no roller.Letter designation of material: C: carbon steel CC: carbon steel case hardened

AC: alloy steel case hardened

CH: carbon steel heat treated AH: alloy steel heat treated

CAST STEEL TRIMMER LUGS

- Suitable for the following chains: S0-578, 81X, 81-XH, MS-88, M0-88, LXS-882
- Lugs available with self cleaning holes as shown in sketch

81-X PUSHER LUGS

- Strong integral pusher lug for many sawmill applications
- Available from stock as a connecting link or roller link

CAN-AM FABRICATED STEEL BULLNOSE ATTACHMENTS

Standard heights of 1 1/2" - 1 3/4" - 2" are available from stock. Manufactured for welded steel chain and trimmer chain.

TRIMMER UHMW ROLLER STYLE LUGS

- Roller Style

 Suitable for all trimmer chains S0-578, 81X, 81-XH, MS88-M088, LXS882, M0H578

 For maximum chain life LXS882
- recommended
- Height and Outside Diameter can be manufactured to your specific requirements

81-X ROOFTOP

Nullibel		mm	
81-X Rooftop	38,1	46,04	66,27

Mill Chain Rivets

 All Super Hog and Whole Hog Chain Rivets 1" diameter and larger are supplied through and induction hardened as standard

• All Trimmer Chain Rivets are supplied Heat

Treated as standard

 Other Induction Hardening & Heat Treating options are available on request, as are zinc plating and galvanizing

SPECIAL SLOTTED A22 FOR RAKEBACK

CAN-AM CHAINS manufactures a full range of chain products especially for the OSB Industry. Many of these are proprietary designs developed for specific applications.

Corrosion, shock loading, fatigue and wearability are common problems that we have generated solutions for.

Consult your "CAN-AM CHAINS" factory representative for details.

ENGINEERING NOTES

To provide the proper chain strength for your application, the data below illustrates the ultimate strength of the chain along with its recommended nominal working load. CDM Systems uses a 5.5:1 safety ratio for proper application.

Chain Series	Ultimate Strength	Working Load	Weight	A	В	C	D	E	Recommended Sprocket Type
		Kg					mm		
102 HVY	17,275	3,135	0.45	35	32	14	9	18	Symmetrical ONLY
142 STD	33,180	5,910	1.11	50	42	19	12	25	Symmetrical
142 HVY	45,000	8.182	1.70	50	62	29	16	25	Symmetrical
142 STD/DBL	33,180	5,910	1.55	See table on page	ge 50 for dimension	nal			Non-symmetrical
142 HVY/DBL	45,000	8,182	2.15	See table on page	ge 50 for dimension	nal			Non-symmetrical
260 STD	68,180	12,390	6.40	75	70	30	20	32	Non-symmetrical

APPLICATIONS

Typical applications for the triple (TPL) series chains include single-strand flight widths up to 30", and, when used in tandem with DBL series chains (for triple strand widths), flight widths reaching up to 12'-0" (3.7m).

TECHNICAL NOTES

The retaining mechanisms used to fasten flights onto the TPL link are standard 142 series U-pins or optional 5/16" grade 8 bolts, identical to those used with the DBL-series shown on page 50. Also available for the TPL link are single-slotted flights that can be made in a variety of materials, shapes and sizes. These can easily be slipped into the groove of the chain link and fastened with a set of U-pins. Contact CAN-AM for more details. Because of their unique design, 142 TPL links require the use of non-symmetrical sprockets ('TN' series) as illustrated on page 39.

Chain Series	Ultimate Strength	Working Load	Weight	A	В	C	D	E	F
		Kg					mm		
142 STD/TPL	33,180	5,910	1.85	50	42	19	12	35.0	92.0
142 HVY/TPL	45,000	8,180	2.45	50	62	29	16	43.5	112.3

This chain type requires the use of non-symmetrical sprocket plates.

Chain Series	Ultimate Strength	Working Load	Weight	A	В	C	D	E	F	G	Н
		Kg					m	m			
142 STD/DBL	33,180	5,910	1.55	50.0	42.0	19.0	12.0	25.0	79.0	33.0	35.0
142 HVY/DBL	45,000	8,182	2.15	50.0	62.0	29.0	16.0	25.0	99.0	43.0	43.5

This chain type requires the use of non-symmetrical sprocket plates.

TO CALCULATE:

WELDED CHAINS

Sprocket Centres:

Subtract **J** from the overall chain width Flight Length:

Subtract **K** from the overall chain width **Hole Centres:**

Subtract L from the overall chain length

NOTE:

Use non-symmetrical sprockets. Flights over 2" high should be notched for sprocket clearance.

DOUBLE SERIES FLIGHTS

The DBL-series flight cutaway diagram shows the slots located at each end of the flight, which allow for expansion and contraction during operation.

One U-pin connector connects each end of this type of flight to a DBL-series chain link. In applications where the flight operates under unusually heavy loads or extreme widths, a stiffener is welded to the back of the flight for extra stability. Although the U-pin is the most common (and preferred) method of fastening DBL flights, 5/16" (8mm) grade-8 bolts can be substituted.

DESIGNATING FLIGHTS:

BT-1 Flight every link BT-2 Flight every 2nd link, etc.

APPLICATIONS

The flights illustrated above represent the most frequently demanded designs in the industry and are by no means the only styles available. The T and BT style flights are used for horizontal through slight incline applications, normally between 0 to 10°, while the U flight can be used for horizontal/incline combinations through approximately 25°. The Modified BT, 0, 00, and 00 with filler plates are utilized in horizontal/inclined applications through 90° (vertical).

TECHNICAL DATA

The flight configurations represented above can handle the majority of your material handling requirements. The letter designator represents the style of the flight, while the number designates its frequency among Leaf chains are well-suited for any application requiring flexible, high-strength linkage for reciprocating motion or lifting at relatively low speed. For their low cost and long life, these chains are widely used for lift trucks, masts and other lifting as well as construction, mining machines and balance or counterweights of machine tools.

CONSTRUCTION AND LACING COMBINATIONS

Built of interlaced plates held together by riveted pins. The chain nomenclature indicates the lacing combinations.

AL SERIES (LIGHT DUTY)

Consisting of link plates of the same contour and thickness as the pin link plates of ANSI roller chains in the same pitch. Mainly used for relatively constant, low, medium load with less shock.

BL SERIES (HEAVY DUTY)

Consisting of link plates with the thickness of the next larger size of ANSI roller chain. Chiefly used for medium load with greater shock.

MAGNA-PLATE™

attach wear plate.

2. High Impact 3. Wet Application

1. Standard

Available in three models:

MAGNETIC WEAR PLATE FASTENING SYSTEM

MAGNA-PLATE[™] is a highly efficient method

of wear plate attachment. This product combines

powerful magnetic elements in flexible

elastomeric compounds. MAGNA-PLATE™

offers a quick, clean and safe method to

NYTRO-PVL

Nytro-PVL is a high performance Engineered Plastic developed for high-speed roller, sharptop, and sharp chain applications.

Nytro-PVL high PV (pressure velocity) and self-lubricating features extend chain life by absorbing impact and lowering operating temperatures, resulting in the reduction of costly downtime.

Nytro-PVL chain beds are custom machined to meet rigid dimensional tolerances for specific chain types, and, holds those tolerances better than steel.

Nytro-PVL dramatically reduces lubrication cost and lowers operating noise decibel

EXTREME DUTY

- Maintenance free permanent magnetic power
- · Fast change out, eliminating welding, gouging and grinding
 - Prevention of weld crystalization Noise and vibration dampening
- Custom designs available to meet specific

WEAR-PLATE ferrous or ferrous hacked wear surface nigh abrasion and existing structure impact area MAGNA-PLATE TM powerful magnetic fastener, absorbs shock and vibration

CAN-AM "ICE"

Can-Am "ICE" is a high performance wear material designed for high load, and tough abrasive applications.

The mechanical properties of Can-Am "ICE" have been modified to increase it's hardness and dimensional stability.

This uniqueness makes Can-Am "ICE" ideal for heavy Mill and Drag chain wear plate applications.

HIGH PERFORMANCE UHMW

$\mathbf{MAGNA}\text{-}\mathbf{WEDGE}^{\mathsf{TM}}$

TRAMP METAL SEPARATOR

Quick and simple installation - installs in minutes utilizing the patented MAGNA-PLATE™ fastening system

- applications include vibratory feeders, chutes and hoppers

Decreased maintenance costs

- capture and retain ferrous tramp metal before entering process equipment

- protect chippers, hogs, grinders and other size reduction equipment

Increased uptime - reduce unnecessary metal detector tripping

- enhanced metal detector performance while permitting higher sensitivity

Quality built

- manufactured out of tough polyurethane, providing years of service

- permanent magnetic power guaranteed to maintain strength

www.magna-skin.com

2500 SERIES CAN-AM BEARINGS features

- Less down time: 3 piece design allows for quick repair of bearing while base remains in place. Simply jack up shaft 1/4", lift out cap and insert, and replace.
- Recessed grease fittings in castings to prevent damage.
- Excellent for log deck application and any larger slow-moving shafts, rollcases, etc.

 Can be mounted in any position
- Base is fab. or cast steel
- 4 choices of bushing material:
- urethane
- bronze
- babbitt
- zinc aluminium
- nytro PVL
- Steel base and ductile iron insert.

Available in Babbitt, Urethane, Zinc-Aluminium & Bronze bushed. Grease fittings are 45° and countersunk into casting to prevent damage. All bearings have ductile housings, and have machine mounting surfaces.

METRIC BORES ALSO AVAILABLE

BEARING LOAD RATING

BEARING LOAD RATING TABLES

The following load rating tables apply when the following installations and operating conditions are met:

- 1. Maintain adequate grease lubrication. Use of EP grease is recommended.
- 2. Align bearings with shaft for uniform load distribution.
- 3. Normal running loads should not exceed ratings shown in load tables. Starting & occasional peak loads should not exceed ratings by more than 100%.
- 4. The journal shaft surface should be equal to that of commercial steel shafting (about 32 micro-inches) and the diameter within the tolerances of commercial steel
- 5. Ambient temperature should not exceed 130° F. for babbitt, 300° F for bronze, 250°F for ZA and 225° F for urethane bushed bearings. If the shaft transmits heat from a source such as an oven, the shaft temperature at the bearing should not exceed these temperatures.
- 6. Where thrust loads are present, install a bronze washer and fasten it in place with a set collar against end of bearing. The bearing ends are finished.

CAN-AM FABRICATED STEEL SPROCKETS are normally made of mild steel plate. Heat treated plate sprockets with hardnesses

treated plate sprockets with hardnesses from 360 to 500 BHN are available. Unless otherwise requested, O.D. of hubs will be sufficient to accommodate bore and keyway desired. Keys are not supplied with these items unless requested or unless mounted on shafts. Split sprockets provide an economical means of mounting sprockets on shafts where it is prohibitive to dismount the shaft assembly. Many sizes of sprockets are stocked with bores, keyways, and set screws already provided. Plates or partially finished sprockets are also stocked. In the case of long link sprockets and idlers, please specify the size of chain that will be used. Bronze and urethane bushing material is stocked for immediate insertion.

Drag chain sprockets are recommended with a full width tooth to extend chain life. Specify flange width, as the sprockets and idlers are only as wide as the tooth face.

AVAILABLE OPTIONS TO CAN-AM CHAINS

Most CAN-AM products can be ordered with mechanical properties to suit specific or unique applications. Some of the variables are listed below.

- Non heat treated sidebars or barrels.
- 2. Through heat treated sidebars, barrels or rivets.
- 3. Induction hardening of already through hardened sidebars, barrels and rivets
- 4. Carborized barrels
- 5. Normalized sidebars and barrels to improve notch toughness for cold weather applications
- 6. Zinc plated, hard chrome plated, stainless and other rivets in optional steels e.g. 1541. 8620, 4140, 4340
- 7. Shot peened rivets
- 8. Prelubricated chain, (molyslip or other)
- 9. Construction by means of standard riveting, welded rivets, or pins

Note: All standard mill class chains are supplied with heat treated rivets.

WELDING PROCEDURE FOR CAN-AM STEEL

Preheat chain and attachments to 93° – 176° C before welding. Preheat temperature is affected by many variables, some are thickness of material, geometry of attachment, and chemical composition of the steel.

- 1. Use a dry 7018 electrode, or #116 flux core, or wire feed with argon/C02 shield.
- 2. Always observe proper welding techniques

Note: CAN-AM Chains is not responsible for chain, or attachment failure, or welding defects, when ex-factory welding is the cause of the failure or defect, and that welding has been performed by other than our own factory certified welders

LUBRICATION

Normal chain wear is often the result of friction between the rivet and LD of the barrel Sprocket size and pitch angle will determine the relative motion between parts, and the degree of wear.

Lubrication of these surfaces would lessen wear and slow the progress of corrosion.

Since lubrication significantly reduces the amount of wear to a chain, it would seem to be good economics to pre-lube chain at the point of manufacture and to lubricate that chain throughout its service life. Even a fine spray of water adds to service life.

BREAK-IN PERIOD

Following a proper and logical "break-in" routine will enhance the service life of welded steel chain products.

CAN-AM RECOMMENDS:

- 1. Chain should be run empty for a period of 6-8 hours, or whatever is practical. A fine spray of water or other lubricant would promote surfaces to polish up.
- 2. Make sure sprockets are correctly aligned and that wear strip is in good condition.
- 3. New chain should always be run on new sprockets. Even if the sprockets are only slightly out of pitch, or have even the smallest "hook" to the teeth, those sprockets will dramatically reduce chain
- 4. Check to ensure that chain will not "bind" or "hang up" along the conveyor path.

SIDELIFT LOG HAUL CONVEYORS

The following recommendations will help in the maintenance of existing conveyors and the design and installation of new systems.

- 1. **Chain Height** This dimension is controlled by the angle of incline in degrees of the conveyor. The most satisfactory incline is 30 degrees. Using that figure the chain height should be 1/3 the diameter of the largest log expected. In other words a 36" diameter log must have a 12" high chain minimum.
- 2. **Head End Design** The sprocket centre must be far enough back from the end of the log haul conveyor to allow for a skid between the top of the sprocket and the end of the log haul conveyor trough. If this were not designed in this manner, the chain could bump it as it travels around on its way back down the sidelift conveyor.
- 3. **Chain Return** A catenary return is best for the chains and conveyor structure. and the slack of the chain should be 5-10% of the sprocket centres.

CONVEYOR INSTALLATION AND MAINTENANCE FOR THE FOREST PRODUCTS INDUSTRY

CAN-AM welded steel chains are manufactured of high quality steels, not available "off the shelf" from any steel supplier. These steels, in combination with careful design and expert manufacturing, have produced a high quality chain product that will give superior life and performance when properly maintained.

The recommendations in this catalogue are based on our own experience and observations after almost 40 years of manufacturing chain for the forest products and other industries. The thoughts and suggestions of millrights, maintenance people, engineers, and others have contributed to our philosophy of the maintenance of chain in an industrial environment.

INSTALLATION OF NEW CHAIN IN A NEW CONVEYOR

Check the following:

- 1. The width of the trough need not be more than 1/2" wider, on each side, than the overall width of the chain including attachments. Chains should not wander from side to side.
- 2. The wear strip must be full width of the conveyor so that the chain runs on the sidebar, the barrel of the chain does not support the chain itself.
- 3. Chains that are run in a trough should be at the correct height. Half the height of the sidebar is a good rule of thumb. If the chain is too low, the log or boards will be slowed in their movement. Conversely, a chain running too high in the trough can be easily forced out of the trough by side loads.
- 4. The root line of the sprocket or drum should be approximately 1/2" above the level of the conveyor wear strip. This allows the chain to be lifted slightly as it contacts the sprocket. The benefits are: immediate contact with the sprocket tooth, rather than 1/3 the way around the drum, and, improved wear life. A low root line relationship between the sprocket and wear strip causes the chain to be pulled down across the end of the wearstrip. This causes premature wear on the sidebars.
- 5. Be certain the chain has the correct amount of slack on the return. A good rule of thumb for conveyor chain is 5-10% of the sprocket centers depending on the size and weight of the chain.
- 6. Pay as much attention to the chain return as to the load side. Use a trough if possible. If not, again, the correct amount of slack is important. Too much slack can cause the chain to sway or jump a condition that increases chain wear
- 7. The last step is never to be forgotten for successful operation. Breaking in a new chain is a very important procedure. The chain should be run, no load, for a few hours (6-8). This will smooth up the chain running surfaces as well as the wear strip and the sprocket tooth face and allow rivet OD and barrel ID to polish up. This will ensure maximum life. It is advisable to have a film of clean water on the chain during the break-in period, and for that matter all the time. Water is an excellent lubricant because it will carry away the dirt generated by the chain rubbing the wear strip and sprocket. A fine spray on the chain at the tail end is enough. It is not necessary to have so much water that it makes a mess under the conveyor.

CUT DOWN ON MAINTENANCE CONVEYOR CHAIN SELECTION

- 1. The overall width of the attachment, including the link, should not exceed twice the length of the chain pitch. For example, WR 132 is 6.050 pitch x = 12.1" so, a 13" cradle would be suitable. Anything longer might cause the chain to twist under leverage, and break the link.
- 2. Head and tail sprockets, when used with attachment chain, should be flanged to locate the attachment when it enters and travels around the sprocket. Flanges are meant only to locate the attachment, not support it. If contact is made, fatigue failures may occur on the attachment welds. Remember to mount the sprocket or idler so that the root line is slightly higher than the wear strip.
- 3. Flare the trough and return ends slightly to prevent the attachments from hanging up on a squared edge
- 4. Wear strips must be full width of the conveyor to support the attachments.
- 5. The preferred wear strip is a minimum of 450 BHN plate or one of several hardened UHMW products. UHMW, of course, has a very low coefficient of friction, and is best suited for **non-abrasive** locations.
- Sprocket pitch diameters should be about 4 X's the chain pitch, for mill chains and 3 X's the pitch for drag chains. Also, it's better to use sprockets with an odd number of teeth
- 7. Sprocket wear A hooked sprocket tooth will eventually hold onto the chain beyond it's normal release point. The worst scenario would have the chain "wrap" the sprocket and break or tear up the drive. Install new chain and sprockets when the chain starts to climb the sprocket tooth. the pitch has now elongated due to wear between the rivet and barrel and possibly elongation of the sidebar hole. This chain will continue to wear itself and the sprocket even more rapidly from this point onward.

Keep the area around tail idlers clear and the idlers themselves turning. Use sprockets if necessary to avoid excess wear on the barrels being dragged around the idler face, if the idler isn't functioning, for the small difference in cost, it's always advisable to install sprockets at the tail end of the conveyor.

Keep idlers and drive sprockets aligned.

- 1. Minimize the number of different sizes of chain in use throughout the mill. Quite often the same chain used on a log deck will also be suitable in a waste conveyor by adding on some weld-on cross flights.
- 2. Conveyor speeds have increased over the years and the chart below, showing recommended maximum FPM, may be of assistance when selecting conveyor chain. Don't forget that **Induction Hardened** pins & barrels can **further increase** these maximums. Consult with your CAN-AM factory representative.

Note the effect that a larger diameter sprocket has on the maximum FPM allowable

If larger sprockets are not practical then often the best answer is to go to a smaller pitch chain. The shorter pitch length will be able to run faster over a given diameter sprocket as its pin & barrel articulation will be less than the larger pitch chain.

Also, when reviewing the above, consider using the smaller chain in its XHD version to increase the maximum working load.

3. Chain wear can be affected by many factors. We have listed some below with our suggestions:

Side Bar Wear

- Check the wear strip for galling. Use a hard wear plate, minimum 400 BHN.
- Grit & dirt can cause excessive wear and if it cannot be eliminated then Induction Hardened components will help increase the service life.
- UHMW or nylon wear strips can help reduce wear, friction and horsepower and are best used in an non-abrasive environment.

Pin to Barrel Wear

 Excessive speed and/or load are two common factors. Induction hardened components will help increase the service

CAN-AM can also supply chains with special components to tackle these problems, regreasable pins and specially hardened components are tools we have suggested and used with great success.

MAXIMUM FPM ALLOWABLE

TERMS AND CONDITIONS

General

These conditions supercede those contained in all previous quotations, orders and agreements whether written or oral and shall be the only conditions governing future transactions between the seller and the buyer, unless otherwise specifically agreed to in writing by the seller. Clerical errors are subject to correction. Time is of the essence hereof.

Quotation Period

A quotation is valid for a period of Thirty (30) days from quotation date. It is subject to partial acceptance only upon written consent of the seller.

Delays

Delivery dates are estimates only and are predicated on conditions as known to the Seller at the time of the quotation and the Seller shall not be liable for any direct, indirect or consequential damages due to delays or inability to perform caused by factors beyond its control including but not limited to acts of God, flood, war, riot, fire, accident, explosion, labour trouble, acts of Government, delay or default by subcontractors or suppliers of material or services or transportation difficulties. Delivery dates shall be extended by the period of such delay.

lerm

All orders are subject to approval of Seller's Credit Department. All payments past due shall bear interest at the rate of 1-1/2% per month (equivalent to 18% per annum) until paid. Orders cannot be cancelled or changed or deliveries deferred, except on terms satisfactory to the Seller. If the Buyer fails to pay an installment of the purchase price when due, the Seller may stop work and, at the Seller's option, the entire purchase price shall become immediately due and payable.

Paymen

All prices quoted are F.O.B. Seller's plant. Sale shall be deemed complete and the property in the goods pass when the goods are ready for delivery. Goods shall be invoiced when ready for delivery and payment thereof shall be net cash Thirty (30) days from the date of invoice. The Seller reserves the right to alter the terms of payment or to require payment prior to the time of delivery if, in the Seller's opinion, the Buyer's financial condition or other circumstances do not warrant delivery on the terms originally agreed upon.

Taxes

Prices quoted are exclusive of all sales and excise taxes, customs duties or other taxes or levies, and the Buyer is to be responsible therefore.

Shipment

If transportation is quoted, the Seller shall decide carrier and method of shipment unless Buyer's instructions have been agreed to by the Seller prior to quotation. The Seller will not be responsible for any loss or damage to the goods after they are ready for delivery to carrier and the Buyer agrees to assume such risks, insurance premiums, special crating or shipping charges shall be arranged and paid for by the Buyer.

Escalation

Prices quoted are based on correct labour rates and material costs and, if applicable, current freight rates, customs duties, taxes and foreign exchange rates and are therefore subject to change to the extent of any change (either before or after acceptance of this quotation and during the contract period) in any of the foregoing items.

Inspection

If Buyer reserves the right to inspect the goods prior to delivery such inspection shall be made within Seven (7) days of Buyer receiving written notice from Seller that the goods are ready for delivery; otherwise Buyer shall be deemed to have waived all rights of inspection and delivery to the Buyer shall be deemed to be complete at the end of the Seven (7) day period.

Storage and Return of Goods

If the Buyer is unable to remove the goods within Thirty (30) days of their delivery ex Seller's plant, the Seller shall be entitled to charge storage on the goods. Goods cannot be returned except upon Seller's written consent, and will be subject to a restocking charge equal to 25% of the Buyer's invoice.

The Buyer agrees to save the Seller harmless from all patent infringement claims, liability and expense resulting from the Seller's compliance with the Buyer's specifications or designs now or hereafter forming a part of any work or from written instructions of the Buyer directing the manner in which the Seller shall perform any work.

Applicable Law

Any contract between the Buyer and Seller shall be subject to and construed in accordance with the laws of the state or province wherein the goods were supplied from.

Specifications

In accordance with the policy of the Seller to constantly improve its products, the specifications, designs, and dimensions contained in this catalog are subject to change without notice.

Responsibility

The Seller declines responsibility for any damages incurred as a result of improper installation of attachments installed by firms other than the Seller.

Packaging

Chain is shipped in wired bundles of approximately 10 foot lengths. Any other lengths required shall be made on Buyer's authorisation at time of order.

Dimensions and Weights

Tabular dimensions and weights are approximate and nonbinding. Design improvements may result in variations to published figures. Verification is recommended.

PRODUCTS AND SERVICES PROVIDED BY CAN-AM CHAINS

SHARP CHAINS D.L.I. CHAINS AUTO ROTATE CHAINS

CAN-AM Chains make a full range of speciality chain and flights to suit all facets of industry.

CAN-AM FABRICATED STEEL SPROCKETS

Normally made of mild steel plate. Heat treated and induction hardened plate sprockets with hardnesses from 360 to 500 BHN are available.

MILL & DRAG CHAIN

CAN-AM's flag ship. We manufacture mill and drag chain for the world.
